

VACCINATION CHECK

APPLE BLOSSOM CATTERY · HOW TO CHECK A VACCINATION CARD

Every cat needs two things in date before it can stay: **enteritis** and **cat flu**. Nothing else is compulsory.

1 · WHICH VACCINE IS ON THE CARD?

2 · IS THE DATE STILL IN DATE?

3 · WAS IT GIVEN 14+ DAYS AGO?

1 Find the vaccine name on the card

It's usually a sticker or a stamp next to the date. Match it to a row below.

THE CARD SAYS...	ENTERITIS	CAT FLU	EXTRAS INCLUDED	ENOUGH ON ITS OWN?
Nobivac Tricat Trio The one you'll see most	Yes · good for 3 years	Yes · good for 1 year	None	YES
Purevax RCP · Purevax RCP FeLV · Purevax RCPCh FeLV	Yes · good for 3 years*	Yes · we count 1 year*	Leukaemia; "Ch" adds chlamydia	YES
Versifel CVR · Felocell CVR · Feligen CRP	Yes · good for 1 year	Yes · good for 1 year	None	YES
Leucofeligen FeLV/RCP · Fevaxyn Pentofel	Yes · good for 1 year	Yes · good for 1 year	Leukaemia; Pentofel adds chlamydia	YES
Nobivac Ducat Flu only — look for an enteritis entry too	No	Yes · good for 1 year	None	NO — needs enteritis too
Nobivac FeLV · Leucogen · Purevax FeLV Leukaemia only — nice to have, not required	No	No	Leukaemia only	NO — needs both
Nobivac Bb (nose drops) · Rabies (travel) Bb: note it — mild sniffles can spread for ~6 weeks	No	No	Bordetella / rabies only	NO — needs both

*Purevax's label allows up to 3 years on flu, but cattery cats need flu cover yearly — we count 12 months on every product. · **The letters:** R/H = herpes (flu) · C = calici (flu) · P = panleukopenia = enteritis · Ch = chlamydia · FeLV = leukaemia. "Enteritis", "FIE", "panleuk" and "parvo" all mean the same thing.

2 Check the dates

Use the *most recent* injection date. Count from the day the cat arrives.

Cat flu 12 months	Must be less than 12 months old on arrival day — every product, no exceptions .
Enteritis 3 yrs or 1 yr	Tricat Trio or Purevax: less than 3 years old. Anything else: less than 12 months. On Tricat/Purevax one injection covers both — if flu is in date, enteritis is too.
Not too soon 14 days / 4 wks	Booster: at least 14 days before arrival (T&C 5.1). First course (kitten, or starting again) = two injections 3–4 weeks apart; the second must be at least 4 weeks before arrival. One injection alone isn't finished.

EXAMPLE

Card says **Nobivac Tricat Trio** — **3 May 2026** (booster). Can arrive from **17 May 2026**. Flu in date until **2 May 2027**, enteritis until **2 May 2029** — so next year the flu needs doing again first.

3 When to say no

Say it kindly, say which bit is missing, point them to their vet. No exceptions — it protects every other cat here.

No card	No card, vet printout or photo on the CatBooker record = no stay. "The vet says it's done" isn't evidence — ask for a printout.
Out of date	Flu over 12 months old, or enteritis past its limit. The vet usually restarts the two-injection course; the cat can come 4 weeks after the second.
Too new	Booster under 14 days ago, or second injection of a first course under 4 weeks ago. Offer a later start date.
Only half the picture	Flu without enteritis (Ducat alone), or only leukaemia / chlamydia / Bordetella / rabies. Both must be there.
Homeopathic "nosodes"	Not a vaccine. The licensing rules say we can't accept them.
Blood-test "titre" letter	A letter saying the cat "still has antibodies" does not replace the flu injection. Enteritis only: Laura or Rhys decide, with a signed waiver.
A name not on this chart	Foreign or unfamiliar product — don't guess. The owner's vet must confirm it covers enteritis and flu, or ask Laura or Rhys.

ALL THREE OK?	Photograph the card and upload it to the cat's CatBooker record — the card goes home, the photo stays.	Write the dates down vaccine name, date given, and the date the flu part runs out.	Not sure? Ask. Ring the vet practice named on the card, or ask Laura or Rhys. Never guess.
