

VACCINATION CHECK

APPLE BLOSSOM CATTERY · HOW TO CHECK A VACCINATION RECORD

Our licence requires current vaccination against **infectious feline enteritis, feline respiratory disease (cat flu)** and any other relevant diseases. Leukaemia is recommended, not required (T&C 5.1).

1 · ENTERITIS + CAT FLU BOTH SHOWN?

2 · WITHIN OUR ACCEPTED PERIOD?

3 · GIVEN EARLY ENOUGH?

1 Find the vaccine name on the record

Usually a sticker or stamp next to the date. Match it to a row below.

THE RECORD SAYS...	ENTERITIS	CAT FLU	EXTRAS INCLUDED	ENOUGH ON ITS OWN?
Nobivac Tricat Trio The one you'll see most	Yes · 3 years	Yes · good for 1 year	None	YES
Purevax RCP · Purevax RCP FeLV · Purevax RCPCh FeLV	Yes · 3 yrs after a booster (1 yr after a first course)	Yes · we accept 12 months*	Leukaemia · chlamydia (Ch)	YES
Versifel CVR · Felocell CVR · Feligen CRP	Yes · good for 1 year	Yes · good for 1 year	None	YES
Leucofeligen FeLV/RCP · Fevaxyn Pentofel	Yes · good for 1 year	Yes · good for 1 year	Leukaemia · chlamydia (Pentofel)	YES
Nobivac Ducat Flu only — look for an enteritis entry too	No	Yes · good for 1 year	None	NO — needs enteritis too
Nobivac FeLV · Leucogen · Purevax FeLV Leukaemia only — nice to have, not required	No	No	Leukaemia only	NO — needs both
Nobivac Bb (nose drops) · Rabies (travel) Bb: note it — sniffles can spread for ~6 wks	No	No	Bordetella / rabies only	NO — needs both

*Purevax's data sheet allows up to 3 years between boosters; our boarding rule is 12 months for flu, every product. · **The letters:** R/H = herpes (flu) · C = calici (flu) · P = panleukopenia = enteritis · Ch = chlamydia · FeLV = leukaemia. "Enteritis", "FIE", "panleuk" and "parvo" all mean the same thing. Anything not on this chart goes to Laura or Rhys.

2 Check the dates

Use the *most recent* injection date. Count from the day the cat arrives.

Cat flu 12 months	Most recent flu injection under 12 months old on arrival day, whatever the product — our boarding rule.
Enteritis 3 yrs or 1 yr	Tricat Trio: under 3 years. Purevax: 3 years after a booster (12 months after a first course only). Anything else: under 12 months.
Early enough 14 days / 4 wks	Booster: at least 14 days before arrival — our rule (T&C 5.1). First course (kitten, or starting again) = two injections 3–4 weeks apart; the second at least 4 weeks before the first day of boarding — licence condition 62. One injection alone isn't a completed course.

EXAMPLE

Record says **Nobivac Tricat Trio — 3 May 2026** (booster). Can arrive from **17 May 2026**. Flu in date until **2 May 2027**, enteritis until **2 May 2029** — so next year the flu needs doing again first.

3 When to say no

Say it kindly, say which bit is missing, point them to their vet. No exceptions — it protects every other cat here.

No record	No card, vet printout or photo on the CatBooker record = no stay. A phone message isn't proof — ask for a printout.
Out of date	Cannot board. The owner speaks to their vet and sends us the updated record; we check it again from step 1.
Too soon	Booster under 14 days before arrival, or a first course completed under 4 weeks before. Offer a later arrival date.
Only half the picture	Flu without enteritis (Ducat alone), or only leukaemia / chlamydia / Bordetella / rabies. Both must be shown.
Blood-test "titre" letter	Not accepted at the desk. Refer to Laura or Rhys — they check it against our licence conditions and veterinary advice.
Homeopathic "nosodes"	Not a vaccine and not accepted. The owner needs to see their vet.
A name not on this chart	Unfamiliar product, or a record from abroad — don't guess. Refer to Laura or Rhys, who will confirm with the owner's vet.

ALL THREE OK?	Photograph the record into the cat's CatBooker record — the card goes home; our proof stays on file for 24 months (licence condition 62).	Write the dates down vaccine name, date given, and the date the flu part runs out.	Not sure? Ask. Laura or Rhys, or the vet practice named on the record. Never guess.
